

Southern California Residential Development Opportunities

The first search should concentrate on western Riverside County for 100-200-home subdivisions. Run a separate search for apartment sites in Wildomar, Lake Elsinore, Hemet, and Ontario. These are priorities for finding and screening opportunities, not findings that particular land is ready to build.

For subdivisions, begin with Menifee, Perris, Hemet-San Jacinto, and Beaumont-Banning. Evaluate Winchester and French Valley selectively under their existing approvals. Ontario Ranch deserves attention where an owner, builder, or master developer needs help with a defined phase.

For apartments, distinguish two-story communities with surface parking from taller buildings. A two-story limit changes the land requirement and can make an otherwise attractive site uneconomic. A 100-unit apartment building also is not the same product as 100 separately saleable home lots.

Why these areas merit investigation

Public records show a 185-lot Perris project receiving an extension in April 2026 and a 105-home Hemet proposal reviewed in March 2025. A broker involved in a San Jacinto transaction reported a 169-lot community sale in June 2026. These are useful precedents for scale and delivery, not available properties.^{2,3,4}

The recommended client

An owner or authorized decision-maker with enough residential land, an approved or plausible development path, and a need for feasibility, approvals, infrastructure, or project management. Include owners of unfinished communities and phases within larger plans. Financial capacity, expectations, and decision authority matter as much as acreage.

Scope and confidence

This is a regional opportunity assessment and landowner-marketing strategy based on public material available September 11, 2026. The strongest evidence concerns project scale, recorded planning actions, and where to investigate. No parcel ownership, willingness to partner, utility capacity, construction bids, title, or development profitability has been independently verified. No claim is made that this covers every developable site in Southern California. Market-rate housing is the working assumption; affordable and age-restricted examples are identified separately.

2. Perris: Council minutes, April 28, 2026, item 10.A.

3. Hemet: DRC agenda, March 27, 2025, The Orchard.

4. Land Advisors: Maravilla Estates transaction, June 15, 2026.

Area priorities and project fit

The order below reflects fit with Brian's stated project size and the evidence found. It is a qualitative research priority, not an investment score or an approval probability. A strong parcel in a lower-ranked area can outperform a weak parcel in a higher-ranked area.

Area	Priority and likely fit	First issue to resolve
Menifee	First-round subdivision search; phases within larger plans.	Existing entitlement, access, drainage, off-site improvements.
Perris	First-round search for roughly 100-200 detached homes.	Airport compatibility, surrounding uses, tract conditions.
Hemet-San Jacinto	First-round subdivisions; selected apartment sites.	Buyer/renter price point, utilities, map and phasing status.
Beaumont-Banning	First-round subdivision and phased-community search.	Infrastructure obligations, district charges, builder competition.
Wildomar	First-round apartment search; selective subdivisions.	Nearby lease-up competition, site layout, service costs.
Lake Elsinore	First-round low-rise apartment screen; selective subdivisions.	Drainage, access, terrain, current adopted zoning.
Ontario / Ontario Ranch	Parallel search for apartments or a defined tract phase.	Land control, applicable specific plan, fee obligations.
Winchester / French Valley	Conditional search for existing approved residential sites.	Exact jurisdiction and adopted rights versus proposed changes.
Hesperia / Victor Valley	Second round after the western Riverside screen.	Service extensions, local demand and major competing communities.
Indio / Coachella Valley	Second round with a locally supported housing product.	Year-round demand, heat-related operating costs, services.
Palmdale / Antelope Valley	Second round, focused on serviceable sites.	Water, sewer, local absorption and infrastructure phasing.
San Diego / Ventura / coastal LA-OC	Selective opportunities; prioritize proven rights or infill.	Land cost, assembled ownership, required density and delivery complexity.

Do not treat the whole Inland Empire as one market. The housing product, competition, selling price or rent, and improvement burden must be tested around the actual parcel. The report gives deeper support for the first eight areas; the outer regions are comparison screens.

Evidence behind the first-round priorities is detailed on the following pages. Secondary-area recommendations are deliberately conditional because comparable parcel and market data are not yet available.

Subdivision search: Menifee and Perris

Menifee

The February 2026 Menifee Valley environmental notice describes a previously approved plan for up to 1,718 homes on 590.3 acres. It also records a July 2025 implementing map for 448 single-family lots. The notice describes off-site road and utility work, illustrating why large development rights must be paired with an infrastructure plan.¹

Recommendation: investigate residential land in or next to established development areas, especially a remaining phase or tract where regional improvements are understood. Begin around the Menifee Valley / Briggs Road area and other areas shown in the city's current development map. An adjoining parcel does not inherit a neighboring project's approvals or utility commitments.

Owner fit: long-held acreage, an approved but unbuilt tract, or a smaller phase within a larger community. Brian's pitch should explain how he evaluates a realistic lot yield, coordinates consultants, and determines the work and funding needed before construction.

The city publishes separate development, zoning, general-plan and capital-project maps, including a September 2026 development/CIP map. Use these layers together to establish the correct parcel context.²⁴

Perris

On April 28, 2026, the City Council approved an extension for a 185-lot, age-restricted detached-home development on 41.70 acres at Mountain Avenue and McPherson Road. This is a particularly close scale match, but its 55-plus restriction makes it a different demand segment from unrestricted family housing.²

A separate May 2026 environmental filing describes Pacific Lantana: 91 detached homes on 12.8 acres, with proposed lots from 3,769 to 6,703 square feet. That filing was a review document, not proof of final construction authorization.²⁸

Recommendation: search for residential tracts around existing neighborhoods and use these two examples to test both conventional and compact-lot concepts. Check March Air Reserve Base and Perris Valley airport compatibility, roads, drainage and industrial adjacency before deciding that an open parcel belongs on the shortlist.²³

Useful landowner topics: developing a residential tract in Menifee; moving an approved Perris subdivision forward; infrastructure planning for 100-200 homes; subdividing acreage into residential lots. These are proposed content themes, not verified search volumes.

1. Menifee: Menifee Valley environmental notice, February 2026.

24. Menifee: City Maps.

2. Perris: Council minutes, April 28, 2026, item 10.A.

28. Perris: Pacific Lantana environmental filing, May 2026.

23. Riverside ALUC: Current Compatibility Plans.

Subdivision search: the valley and the pass

Hemet and San Jacinto

Hemet's March 27, 2025 Development Review Committee agenda includes The Orchard, a preliminary proposal to divide 21.58 acres into 105 single-family homes and two open-space lots at Lake Street and Florida Avenue. Preliminary review is not an approval, but it is a concrete local example near Brian's preferred scale.³

In San Jacinto, Land Advisors reported the sale of Maravilla Estates to LGI Homes on June 15, 2026. It described a 169-lot active-adult community with a recorded final map and finished lots, alongside completed homes and remaining inventory. The source is the seller's broker, not an independent audit of the transaction.⁴

Recommendation: investigate comparable unbuilt tracts, residual phases and private owners with existing approvals. Start with the urbanized west Hemet area and established San Jacinto residential corridors, then screen the precise parcel. Do not infer that a recorded community still has its full original lot count available.

The main commercial question is the end product. Obtain current comparable home sales, builder incentives and sales pace for unrestricted homes separately from 55-plus communities. For apartments, obtain effective rents and lease-up evidence; a countywide median cannot establish project feasibility.

Beaumont and Banning

Beaumont's project register includes multiple tentative maps and apartment proposals. Its Potrero interchange page describes a planned Phase II project intended to improve movement and support growth. A planned public improvement should remain a schedule dependency until its funding and completion are verified.^{5,33}

Banning's June 23, 2026 staff report reviews the Atwell development agreement. It documents ongoing delivery under a specific plan and agreement, including fees, financing districts, infrastructure milestones and credits. The report is evidence of an established large-project process, not an invitation to acquire Atwell land.⁶

Recommendation: pursue landowners with a manageable tract or phase and documented access to the required infrastructure. Review special taxes, development-agreement duties and improvement reimbursements at the parcel level. Request a complete cost-to-finish package for partially developed sites.

Brian may be especially useful when an owner has a map but needs to coordinate utilities, civil design, agency conditions and builders. Do not assume an extension or unfinished project means the owner is distressed or looking for a partner.

3. Hemet: DRC agenda, March 27, 2025, The Orchard.

4. Land Advisors: Maravilla Estates transaction, June 15, 2026.

5. Beaumont: Planning Projects register.

33. Beaumont: Potrero interchange Phase II.

6. Banning: Atwell ten-year review, June 23, 2026.

Apartment search and the two-story question

Wildomar

Intracorp describes DAX as a 150-unit garden-style apartment project under construction near Clinton Keith Road and Wildomar Trail. Its page anticipates leasing in winter 2026; that is a developer forecast, not a confirmed occupancy date. It is both a relevant product example and future competition.⁷

Affirmed Housing separately announced construction of 130 affordable apartments at Bell Ranch in May 2025. This supports the presence of projects at Brian's scale, but affordable financing and restricted rents cannot be used as evidence that an equivalent market-rate project works.²⁹

Lake Elsinore

A November 2025 city environmental notice describes Riverside Drive Apartments: 96 units on 4.95 acres in 12 two-story residential buildings, with 200 parking spaces. It is a useful near-100-unit example of the low-rise form Brian described. It does not establish a universal density or parking allowance.⁸

Hemet

Aster River Oaks received city approval in March 2025 for 228 units on 10.07 gross acres. It uses eight three-story apartment buildings. Its scale is relevant, but its land efficiency must not be attributed to a two-story design.⁹

Ontario and Ontario Ranch

Ontario provides specific plans and monthly planning activity resources; the city describes Ontario Ranch as a 13-square-mile master-planned area. Investigate individual residential planning areas and infill sites. Each plan can impose its own use mix, density, design and improvement obligations.^{10,31}

Recommendation: screen Wildomar and Lake Elsinore first for two-story concepts; retain Hemet and Ontario for sites where the economics and allowed building form align. Extend into Murrieta, Fontana, Rialto or Colton only after finding supporting parcel and competitor data. Those extensions have not received the same depth of review here.

Market context

CBRE reported 96.0% Inland Empire apartment occupancy and 1,048 units of net absorption in Q2 2026. This supports further inquiry, but regional figures mix locations and property ages. Brian still needs direct competition, achievable net rents, operating costs, financing terms and a lease-up schedule for each site.¹²

7. Intracorp: DAX project page.

29. Affirmed Housing: Bell Ranch construction announcement, May 2025.

8. Lake Elsinore: Riverside Drive Apartments, November 2025.

9. Hemet: Aster River Oaks notice, March 2025.

10. Ontario: Specific Plans.

31. Ontario: Planning Department resources.

12. CBRE: Inland Empire Multifamily Figures Q2 2026.

Conditional and secondary search areas

Winchester and French Valley

The county's Winchester Community Plan page says the proposal was continued off-calendar in October 2024; it also lists an April 2026 community presentation. The page does not establish that the overall proposed plan is adopted. Existing approved specific plans are a separate matter and should be checked directly.^{11,32}

Recommendation: retain already entitled or clearly conforming sites. Place sites dependent on proposed land-use changes in a separate speculative category. Check actual city/county boundaries, adopted maps, drainage and road obligations before quoting a housing yield. A Winchester mailing address is not a zoning determination.

Hesperia, Victorville and Apple Valley

DMB lists Silverwood in Hesperia as entitled for 15,663 homes. Hesperia also reports adopting updated land-use and safety elements in July 2025 and its circulation element in October 2025. These justify a focused Hesperia screen; they do not establish that nearby raw desert parcels are serviceable.^{13,14}

Recommendation: prioritize connections to existing neighborhoods and infrastructure. Treat major master plans as competition as well as evidence of activity. Victorville and Apple Valley remain follow-on markets until their individual sites and local housing demand are reviewed.

Indio and the Coachella Valley

Indio's April 2026 Estrella Estates notice documents a 50-lot development on 7.61 acres. It supports compact residential activity, but is smaller than Brian's target. A 100-200-home proposal needs separate evidence of year-round buyer demand, utilities and infrastructure.¹⁶

Palmdale and the Antelope Valley

Los Angeles County approved a project-specific water supply assessment for Falcon Glen in Palmdale in July 2025. Use that as a reminder that water support is documented for a defined project, not a blanket finding that all Antelope Valley land can be developed.¹⁵

San Diego and Ventura counties

San Marcos publishes inclusionary-housing and fee requirements. Santa Paula publishes East Area One amendment material, while Escondido describes a proposed 550-home Harvest Hills project. These show that opportunities exist, but project status, ownership and obligations vary substantially. Favor a clearly entitled phase or serviceable infill opportunity over assuming that large vacant acreage offers a quick path.^{17,18,19}

Coastal Los Angeles and Orange County are selective infill and redevelopment searches for this strategy. No comprehensive parcel screen or current land-price comparison was completed there. Imperial County and other outlying markets were not assessed deeply enough to rank.

11. Riverside County: Winchester Community Plan status.

32. Riverside County: Approved Specific Plans.

13. DMB Development: Silverwood project portfolio.

14. Hesperia: General Plan adoption information.

16. Indio: Estrella Estates notice, April 2026.

15. Los Angeles County: Falcon Glen water assessment, July 2025.

17. San Marcos: Developer Resources.

18. Santa Paula: East Area One amendment materials.

19. Escondido: Harvest Hill Specific Plan project description.

Land requirements and development economics

Use acreage as an initial filter, not a promise of how many homes fit. Gross acreage includes the whole site. A realistic yield must allow for roads, drainage, slopes, open space, easements and any unusable land.

The following are illustrative arithmetic scenarios selected for screening. They are not local zoning standards, engineering estimates or measured market averages.

Illustrative gross density	Land for 100 homes	Land for 200 homes
3 homes per gross acre	33.3 acres	66.7 acres
4 homes per gross acre	25.0 acres	50.0 acres
5 homes per gross acre	20.0 acres	40.0 acres
6 homes per gross acre	16.7 acres	33.3 acres
8 homes per gross acre	12.5 acres	25.0 acres
15 apartments per gross acre	6.7 acres	13.3 acres
20 apartments per gross acre	5.0 acres	10.0 acres

A reasonable first-pass search window is about 20-70 gross acres for conventional 100-200-home subdivisions, while keeping denser or more constrained exceptions. For two-story apartments, start around 5-15 acres, then require an architect to test buildings, parking, access and open space. Larger sites may be necessary.

The actual precedents illustrate variation: the 185-lot Perris project is approximately 4.4 homes per gross acre; The Orchard proposal is about 4.9; Riverside Drive Apartments is about 19.4 units per gross acre. These are calculations from published project areas and unit counts, not interchangeable entitlements.^{2,3,8}

Two-story homes versus two-story apartments

A two-story detached house can reduce its footprint but still requires a separate lot and subdivision design. Stacking apartments changes the building layout, access, parking and ownership structure. The zoning density alone cannot confirm that either layout works.

The financial screen

For homes: test net sales proceeds less land, site work, buildings, fees, consultants, financing, carrying costs, selling expenses, contingency and required profit. For apartments: test achievable net operating income and supported completed value against total development cost and financing requirements. Obtain actual market evidence and lender input before deciding the land value.

Stress-test a lower sales price or rent, higher construction cost, slower sales or leasing, and a delay in delivery. Keep landowner equity, developer fees, cash contributions and risk allocation separate. This report supplies no project valuation or return forecast.

2. Perris: Council minutes, April 28, 2026, item 10.A.

3. Hemet: DRC agenda, March 27, 2025, The Orchard.

8. Lake Elsinore: Riverside Drive Apartments, November 2025.

Parcel screening and early rejection criteria

Apply these gates before spending heavily on design. An unresolved material issue should remain marked unknown; it should never receive a favorable score just because the information is missing.

Gate	Evidence required before advancing
Ownership and control	Current title, legal parcels, authorized decision-maker, access and utility easements, restrictions and existing agreements.
Adopted land-use rights	Written confirmation of zoning, general plan, specific plan, allowable product and density. Confirm map validity, extensions and remaining conditions.
Practical site yield	Civil/architectural concept using surveyed area, slope, access, drainage, open space, setbacks and parking.
Water and sewer	Correct provider, service area, capacity and pressure, connection points, off-site upgrades, fees, schedule and any conditions of service.
Other infrastructure	Power availability and timing, roads, fire access, stormwater, schools, phased improvements and reimbursement obligations.
Environmental and hazard screen	Flood, fire, geology, prior contamination, habitat and cultural resources, plus applicable airport compatibility.
Market and finance	Comparable new homes or apartments, incentives, absorption, supported pricing, current bids, equity and lender terms.
Owner objectives	Sale, management engagement or partnership; land valuation expectations, time horizon, cost sharing and decision rights.

Use current official maps

FEMA provides flood-map screening. CAL FIRE provides fire-hazard mapping, including the 2025 local-area rollout; local adoption and project requirements must be checked. Fire-hazard mapping is not an insurance quote. Riverside ALUC publishes airport compatibility plans; its website separately identifies a proposed 2026 March plan, so distinguish existing rules from proposals.^{21,22,23}

Habitat, drainage and access constraints are parcel-specific. Obtain the applicable conservation-plan review and specialist studies rather than assuming that vacant, flat-looking land is unconstrained. A pipe or paved road beside the parcel is not proof of available capacity or a right to connect.

Reasons to pause or reject

No workable residential entitlement path; no legal access; infrastructure costs unsupported by the project; too little usable land; unresolved title or conservation restrictions; or an owner's price that leaves no viable margin. A listing claim that the city is interested is not a written approval.

21. CAL FIRE: Fire Hazard Severity Zones.

22. FEMA: Flood Map Service Center.

23. Riverside ALUC: Current Compatibility Plans.

Finding the right landowners

SEO should support a defined prospecting program. Owners of a 150-lot tract may use technical language themselves, rely on advisers, or find a developer through a land broker. Brian should be visible both to owners asking basic questions and to professionals looking for execution help.

Build the prospect list from planning records

HCD's sites-inventory program identifies parcels suitable for residential planning and links to a statewide map. Local inventories can supply starting points for parcel research. Inclusion does not mean an owner wants to sell, a project is approved, or all infrastructure is available.²⁰

Cross-check the inventory against current zoning, tentative and final maps, environmental notices, development agreements and city activity reports. Menifee offers separate mapping layers, while Ontario publishes monthly planning-activity resources. A public application can identify the applicant and consultant, but those are not necessarily the present owner.^{24,31}

Prospect type	Potential need for Brian
Owner with approved but unbuilt tract	Update cost-to-finish, resolve conditions, plan infrastructure and coordinate delivery.
Long-held residential acreage	Establish feasible housing yield, approval path, budget and owner options.
Partially completed community	Review remaining inventory, unfinished works, bonds, warranties and phase obligations.
Owner of multifamily-designated land	Test two-story versus taller design, parking, rents and development costs.
Master developer or builder with a phase	Provide defined project leadership and consultant/contractor coordination.
Land broker or owner adviser	Supply a documented feasibility and execution review for a suitable client.

Keep a simple qualification record

Record the assessor parcel number, jurisdiction, gross and usable acres, adopted designation, existing maps, realistic unit range, utility status, major constraints, owner/representative, goal, supporting documents and next action. Date every status entry. Label proposed, approved, under construction and completed separately.

Brian's positioning

Present the service as residential development expertise for landowners planning housing communities and apartment projects, with a clear preferred scale of roughly 100-200 homes or units. Explain whether he manages development, builds under a construction contract, or enters selected partnerships. Do not imply that he supplies investment capital unless he does.

Case studies should identify his actual role and employer or company at the time. Show the original challenge, project scale, responsibilities, improvement work and documented outcome. Avoid promising approvals, fixed profitability or a guaranteed construction date.

20. HCD: Sites Inventory Form and Instructions.

24. Menifee: City Maps.

31. Ontario: Planning Department resources.

Keywords for larger projects

These are keyword candidates and content topics, not measured search volumes. Use relevant city or county names naturally. Prioritize landowners and project decision-makers; do not make buyer searches such as "new homes in Menifee" the center of this campaign.

Owner need	Candidates to validate
Residential communities	residential land development company; residential subdivision developer; housing community developer; land development project management; master planned community development services; residential tract development consultant
Turning acreage into lots	develop my land into a housing community; subdivide acreage into residential lots; how many houses can I build on 40 acres; residential subdivision feasibility study; 100 lot subdivision development; 200 lot subdivision development
Existing approvals	develop approved residential land; approved subdivision project management; tentative tract map consultant; subdivision infrastructure planning; finish an incomplete housing development; land development cost to complete
Apartments	apartment development company; multifamily development consultant; garden style apartment development; two story apartment development; develop my land into apartments; apartment development feasibility study
Budgets and infrastructure	residential land development budget; cost to develop 100 residential lots; subdivision infrastructure cost estimate; sewer and water planning for subdivision; residential development due diligence; predevelopment services for landowners
Hiring a manager	hire a residential development manager; owner representative for land development; manage my subdivision project; coordinate residential development approvals; construction management for housing developments; multifamily development management
Partnerships: only if offered	landowner developer partnership; residential development joint venture; partner with a developer to build homes; contribute land to housing development; multifamily development partner; joint venture developer Southern California

First local combinations to test

Residential subdivision developer Menifee; land development project management Perris; subdivision feasibility study Hemet; residential land development San Jacinto California; subdivision developer Beaumont California; residential development management Banning; apartment development consultant Wildomar; two story apartment development Lake Elsinore; multifamily development consultant Ontario California; approved land development Winchester California.

Publish related phrases on strong service pages, not one thin page for every phrase. Keep permit and entitlement content because advisers may search that way. Reduce emphasis on ADUs, one custom home, lot splits for a second house, and homebuyer searches if Brian does not want those leads.

Validate estimated demand with Keyword Planner and actual impressions/clicks with Search Console. Measure qualified owners, site reviews and engagements. Do not invent volume for long phrases. Avoid substantially duplicated city pages, which Google identifies as a doorway-abuse risk.^{25,26,27}

25. Google: How to use Search Console.

26. Google: Use Keyword Planner.

27. Google: Spam Policies, doorway abuse.

A practical first 30 days

The following is a proposed work program, not a forecast of results. Its purpose is to turn a regional shortlist into a small number of documented opportunities.

Stage	Work	Deliverable
Days 1-3	Confirm preferred unit count, housing type, service model, geography, project stage, funding role and minimum engagement.	One-page project acceptance brief.
Days 4-10	Screen roughly 30 candidate sites or tracts across the priority areas using local inventories and records. This is a research target, not a claim that 30 suitable sites exist.	Dated candidate register with source links and unknowns.
Days 11-17	Reduce to 8-12 plausible candidates after rights, access, services and major constraints are checked. Seek owner/planner information through Brian's approved process.	Short profiles showing reasons to advance or reject.
Days 18-24	For the best 3-5 candidates, obtain preliminary civil yield, infrastructure scope and comparable sales/rent evidence.	Initial feasibility briefs with decision gates.
Days 25-30	Choose which opportunities justify paid diligence. Publish the first service and area pages based on the actual target.	Prioritized next steps and a measurable marketing plan.

The first website pages

1. Residential Development for Landowners in Southern California.
2. Subdivision Development and Project Management in Riverside County.
3. Apartment Development and Feasibility Services.
4. Developing Approved but Unbuilt Residential Land.
5. Menifee and Perris project guidance with distinct local material.
6. Project case studies demonstrating Brian's personal responsibilities.

Questions that will materially change the ranking

Does Brian want fee-based management, a construction contract, or a joint venture? Does he bring capital or financing relationships? Is two stories a firm limit for apartments? Will he pursue unentitled raw land or only approved projects? Does he accept affordable or age-restricted housing? What travel radius and capital exposure are acceptable?

What remains unverified

No specific owner has agreed to work with Brian. The examples in this report are precedents and competing projects, not advertised opportunities. Current parcel availability, ownership, title, buildable area, service capacity, fee quotes, market absorption, financing and profitability remain open. There is no supported basis to rank individual parcels until those checks are completed.

Recommended first decision: authorize a parcel-level screen in Menifee, Perris, Hemet-San Jacinto and Beaumont-Banning, alongside a focused apartment screen in Wildomar, Lake Elsinore and Ontario. Keep Winchester conditional on existing adopted rights.
